Automate Your Cancer Registry Reporting

The Utah Cancer Registry collects data that is critical for tracking trends in cancer occurrence and assessing the results of prevention and control efforts. Cancer Registry data contributes to the development of cutting-edge treatments for cancer.

Healthcare providers are legally required to report almost all cases of cancer they diagnose to the Utah Cancer Registry. You can submit reports by connecting a certified Electronic Medical Record (EMR) system to the Registry, or you can automatically submit through UHIN, the Utah state-designated Health Information Exchange (HIE.) UHIN’s clinical HIE (cHIE) interfaces with both certified and non-certified EMR systems. Additionally, the cHIE searches the text of incoming clinical notes for cancer mentions, and can submit these data to the Registry.

Grant funds are available to offset fees associated with connecting to the cHIE. For more information contact UHIN Provider Consultant Merri Rock at 385-800-2520 or mrock@uhin.org, or visit UHIN’s website at www.uhin.org.
